

Management Solutions announces two new hires

KNOXVILLE, Tenn., Dec. 2, 2013 – Management Solutions announces two new hires in the areas of business operations and information technology (IT) services. Bill Myers has been named to the newly created position of director of operations/chief financial officer and Nathan Sloan has been named senior software specialist.

“We are excited to welcome both Bill (Myers) and Nathan (Sloan) to our staff,” said Misty Mayes, president and founder of Management Solutions LLC. “They bring specific expertise and knowledge critical to our continued growth and ongoing servicing of our client base, and we are excited to fully integrate them into our projects.”

Details about each new hire are listed below.

About Bill Myers, director of operations/chief financial officer

Bill Myers, a seasoned management executive and long-time Knoxville business leader, has joined the Management Solutions team as Director of Operations and Chief Financial Officer. With the addition of several new clients and ongoing plans to strategically grow the company, Management Solutions created this position in order to have a dedicated senior staff member work with company leadership to link short and long-range plans with day-to-day business operations. Myers will utilize his broad scope of knowledge to guide the Management Solutions team in a variety of areas, including operational budgeting, risk management, financial analysis and contract management. He will report to Misty Mayes, Management Solutions president, and Sam Mayes, Management Solutions vice president, on specific areas of responsibilities.

Myers comes to Management Solutions from University of Tennessee (UT) Athletics where he held several leadership positions during his 15 years there, including most recently serving as CFO/senior associate athletic director. He is a financial management executive who brings 19+ years of experience leading and advising corporations and University entities through dynamic financial environments. He has a particular focus on and background in financial analysis, budgeting, and complex data management. At UT, Myers successfully managed major department changes and mergers and served as CFO of a department of athletics with an annual operating budget of approximately \$100 million and 250 staff members supporting more than 500 student-athletes across 20 teams. Prior to UT he worked for international consulting firm Andersen Consulting.

Myers earned his undergraduate and graduate degrees from the University of Tennessee; he earned a B.S. in Business Administration, Finance, Summa Cum Laude in 1992, and an M.S. in Education, Sport Administration in 1997.

Myers and his wife, Rachel, live in Knoxville with their daughters Kate and Anne Claire.

About Nathan Sloan, senior software specialist

Nathan Sloan recently joined the Management Solutions team and serves as senior software specialist in the Management Solutions IT Services division. His main responsibilities include designing, developing, and maintaining system databases for Management Solutions' customers.

Sloan has 15 years of traditional and online development experience as a software/systems engineer for a variety of clients and customers in both the federal and commercial sectors. He has extensive knowledge of network architecture, a solid background in system engineering and has worked with large-scale, high-availability, public applications for core company technologies and client-driven initiatives.

Sloan comes to Management Solutions from Professional Project Services (Pro2Serve) where he was a computer program analyst serving as lead developer for the WIT and EDGE Engineering Tools. He also was the team lead/wireless engineer in the USAF 91st Missile Wing RVA Project. Prior to Pro2Serve he was principal engineer at Omnicell, senior application developer at Appalachian Underwriters, held several positions at Internap Network Services Corporation, including systems engineer, and also worked as information technology/systems manager at Tennessee Production Center and technical manager at LazerPort.

Sloan has developed many applications, including WIT – the What If Tool – which creates “what if” scenarios for existing Primavera P6 Projects and EDGE - Engineering Decisions Based on Graded Evaluations of Lifecycle Costs – which is a bottom-up lifecycle cost estimating and comparison tool. He’s also developed real-time monitoring for MySQL and MSSQL database servers, a distributed web server for guaranteed and secure file delivery and tracking and an unstructured text clustering and analysis tool for forensic discovery and intelligence gathering among others.

Sloan grew up in Maryville and lives in nearby Seymour with his wife, Misty.
